NEEDLE VALVES

- Sizes: 1/4" to 1"
- Pressure Ratings: 6,000 PSI, 10,000 PSI, 15,000 PSI
- NPT, ISO/BSP, Threads
- Stainless Steel (316L,316,304,304L), Monel K400, Monel K500 NACE MR-01-75 & NACE MR-01-03

NEEDLE VALVES

TVI Needle valves have a slender, tapered point at the end of the valve stem that is lowered through the seat to restrict or block flow. Fluid flowing through the Needle valve turns 90 degrees and passes through an orifice that is the seat for a rod with a cone shaped tip. Needle valves are widely used to accurately regulate the flow of liquids and gases at low flow rates. The fine threading of the stem and the large seat area allow for precise resistance to flow. Needle valves are used to control flow into delicate gauges, which might be damaged by sudden surges of fluid under pressure. Needle valves are also used in situations where the flow must be gradually brought to a halt, and at other points where precise adjustments of flow are necessary or where a small flow rate is desired. They can be used as both on/off valves and for throttling service.

TVI Needle valves are often designed with a metal needle (generally brass, bronze, or stainless or other alloys of steel) and an elastomeric seat (generally PVC, CPVC, PTFE, or a wide range of brand name plastics and thermoplastics). While this is the most common form, valves are available that have metal - metal, plastic – plastic, or plastic- metal needles and seats. These variations are usually designed with specific applications in mind, especially situations where corrosion, high or low temperatures or extensive wear are possible. In such cases, it is best to consult with the manufacturer to find which type of valve is best for the application at hand.

TVI Needle valves are used in almost every industry in an incredibly wide range of applications - anywhere control or metering of steam, air, gas, oil, water or other non-viscous liquids is required. They can be found in every industry from aerospace to zoological sciences, every service from gas and liquid dispensation to instrumentation control and cooling to power generation. However, Needle valves should be avoided in applications where the media is viscous, or in the dispensation of slurries. The small flow orifice can easily trap thick materials or solids and become blocked.

TVI Brand Make Needle valves are available in materials like - Steel, Stainless Steel, Brass, Monel , & various Alloy & Non Alloy steel.

Features

- Materials include high tensile type 316 stainless steel.
- The location of packing is under the thread of valve stem.
- Non-rotating stem and bar stock body design.
- Easy to assemble and replace packing.
- PTFE encapsulated packing provides dependable stem and body sealing.
- Bonnet lock pin to prevent accidental loosening.
- Dust caps are fitted to contain stem lubricant and prevent the ingress of contaminants.
- One piece bonnet with a metal to metal seal to the valve body below the bonnet threads.
- All bonnets are assembled with a locking pin to prevent accidental removal while in service.
- The stem threads are rolled and lubricated to prevent galling and reduce operating torque.
- Panel mounting options available.
- Variety of end configurations includes PMT Tube Fittings, Male/Female NPT, BSPT, BSPP pipe and tube socket weld connections
- Hardened Stem Tip
- Flow Coefficients (Cv) From 0.31 to 1.40
- Orifice Size: 0.138" (3.5mm) to 0.250" (6.4mm)
- Every valves is factory tested.

Texas Valve & Instruments, LLC 8221 Lockheed Ave Houston, Tx 77061

Stem Tip Designs

Hard seat Spindle Design :-

Soft seat Spindle Design :-

 Spindle is standard for pressure tightness even at elevated temperatures. Regulating Spindle & Soft-seat Spindle are optional.

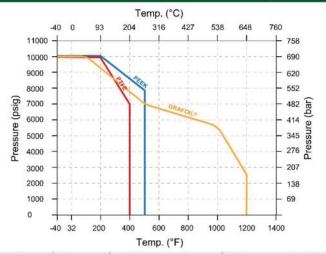

Non-rotating Metal Vee Tip :-

A non-rotating Vee tip is typically used in high cycle applications to extend the service life of the valve. When the valve is closed, the Vee tip contacts the valve seat, and is driven straight into it without rotating.

Non-rotating Metal Ball Tip:-A non-rotating Ball tip operates in the same fashion as the non-rotating metal Vee tip but requires less seating torque.

Pressure-Temperature Rating

Body Material	Packing Material	Temperature Rating	Pressure Rating @37° C (100°F)		
Stainless	PTFE	-54 to 232° C (-65 to 450° F)	413 bar (6,000 psig)		
steel	Grafoil	-54 to 648° C (-65 to 1200° F)	690 bar (10,000 psig)		
Carbon	PTFE	-29 to 176° C (-20 to 350° F)	413 bar (6,000 psig)		
steel	Grafoil	-29 to 176° C (-20 to 350° F)	690 bar (10,000 psig)		

Applications

- General Plant Service
- Hydraulic and Pneumatic
- Pressure measurement devices
- Instrument isolation
- Condensates
- Venting

Available Options*

- High Temperature
- High Pressure
- NACE
- Tube End Connection
- Alternates Connection Sizes

Pressure Rating

Valve Size	Orifice	Cv	Max. Working Pressure
1/4"	3.5mm	0.31	10,000 psi
3/8"	3.5mm	0.31	(690 kg/cm ²)
1/2"	4.8mm	0.52	6,000 psi (413 kg/cm ²)
3/4"	6.4mm	1.40	(410 kg/om -)

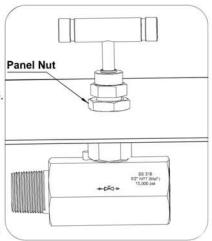

How To Panel Mount

Disassembly

- 1.Un-tighten the handle set screw using an allen key and remove the handle.
- 2.Remove the packing nut & panel nut and set aside for later use.
- 3. Place the valve bonnet in the panel hole.

Reassembly

- Tighten the panel nut onto the valve bonnet. Keep the panel nut always on the external portion of the panel.
- 5. Finger tighten the packing nut onto the valve body.
- Place the round handle on the stem. Align the set screw with the groove on the side of the stem. Tighten the set screw.
- Fully close the valve and retract the stem two or three turns before torque the packing nut to the torque below.

Factory Test

Standard Test: Each valve is factory tested with nitrogen at 1000 psig (69 bar) for leakage at the seat and packing, the maximum allowable leak rate of 0.1 sccm.

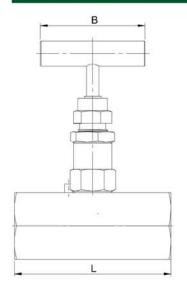

Optional Hydrostatic test: This test is performed with pure water water at 1.5 time the working pressure. Other tests like vibration, temperatures, helium etc are available upon requests.

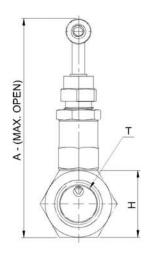

Packaging

All exposed threads of the product slare Protected with plastic caps to prevent damage and each assembly is packed in sealed, and idear polyethylene bag for cleanliness and carefully packed in cardboard boxes to prevent transit damage. Each and every package is labeled for proper and easy identification.

High Pressure Needle Valves

PRESSURE RATING :- 15,000 PSI

TVI High Pressure Needle Valve 15,000 PSI is designed for leak free closure, regulation and management of fluids in process systems. With a wide variety of port sizes, end connections, style, temperature and pressure tolerance TVI Needle Valve are critical for instrumentation, fluid and process control system.

High Pressure Needle valve can be Manufacture up to Working Pressure 15,000 psi & Burst pressure up to 15,000 psi. High Pressure Needle valves are widely used for Severe Service Operation as regulating and shut off type in critical High pressure up to 10,000 psi.

TVI High Pressure Needle valves are available in Steel , Stainless Steel , Brass Materials & can be applicable for Fluids like water , Oil , Petrol , Grease, chemicals , viscous gases. Needle valves can be made in Forged body & also in Solid bar stock body.

TVI Brand Make Needle valves are available in materials like - Steel, Stainless Steel, Steel Phosphatised / Yellow chromatize / trivalent Zinc Blue Passivation.

High Pressure Needle Valve Special Features

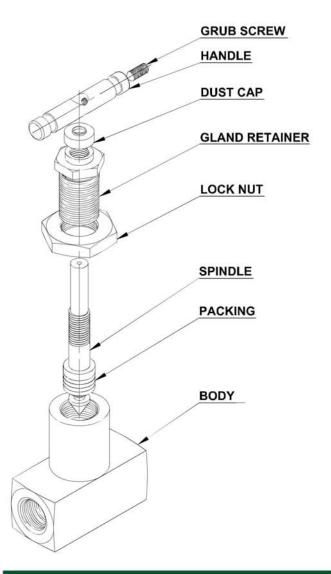

- Valve bodies through 10,000 psi are high tensile Type 316 stainless steel,15,000 psi valve bodies are 17-4 PH stainless steel.
- Their rugged construction provides assurance of fail-safe operation at pressures ranging to 15,000 PSI (1030 bar).
- Available in a variety of Body styles, the valves are designed for operation at temperatures ranging from -100° to +600°F (-73° to +315°C).
- Stem packing below the threads prevents thread galling & contamination.
- Easy handling even at high pressure (switching through 90°)
- · Low torque operating T bar handle..

Features

- Materials include high tensile type 316 stainless steel.
- One piece bonnet with a metal to metal seal to the valve body below the bonnet threads.
- Non-rotating stem and bar stock body design.
- Easy to assemble and replace packing.
- Bonnet lock pin to prevent accidental loosening.
- Dust caps are fitted to contain stem lubricant and prevent the ingress of contaminants.
- The stem threads are rolled and lubricated to prevent galling and reduce operating torque.
- The material of packing gland and upper stem have been selected to achieve reduced handle torque and extended thread cycle life.
- 100% factory test. Every valve is tested with nitrogen for leak-tight performance at its maximum working pressure.

BODY Forged one piece body construction (no welding) for high strength.

GLAND RETAINER Standard Construction For maximum pressure ratting.

SPINDLE Designed for low torque operating with high quality micro mirror stem finish for positive gland sealing.

LOCK NUT. A secure anti vibration locking mechanism to prevent inadvertent gland adjuster loosening.

PACKING PTFE stem packing seals the system fluid to atmosphere.

HANDLE Removable T-bar handle aids low torque operation.

FLOATING CONICAL TIP Self centering, non-rotatinal VEE tip gives successive positive bubble tight shut off assuring the user of leakage free performance and down stream functional safety.

DUST CAP Prevents contamination and lubricant washout of bonnet assembly.

GRUB SCREW For locking the handle.

Testing

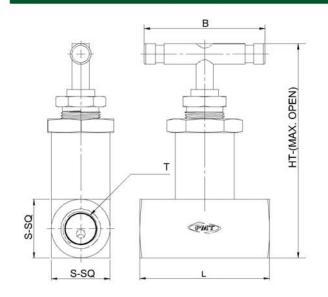

Each valve is Hydrostatically tested in accordance with MSS-SP-99. This procedure includes testing of the body cavity. Hydrostatic test is performed with pure water or other liquid of similar or lower viscosity at 1.5 times and seat leakage test at 1.1 times of the maximum working pressure. Other tests like vibration, temperatures, helium etc are available upon requests.

Packaging

All exposed threads of the product s are Protected with plastic caps to prevent damage and each assembly is packed in sealed and clear polyethylene bag for cleanliness and carefully packed in cardboard boxes to prevent transit damage. Each and every package is labeled for proper and easy identification.

Texas Valve & Instruments, LLC 8221 Lockheed Ave Houston, Tx 77061

Low Temperature Needle Valves

BODY Forged one piece body construction (no welding) for high strength. GLAND BODYFor maximum packing stability and performance.

SPINDLE Designed for low torque operating with high quality micro mirror stem finish for positive gland sealing.

GLAND NUT A secure anti vibration locking mechanism to prevent inadvertent gland adjuster loosening.

GLAND BUSH Annealed sealing washer to ensure complete atmospheric leakage and allowing on site retro-fit of bonnet with 100% re-sealing assurance.

PACKING PTFE stem packing seals the system fluid to atmosphere.

HANDLE Removable T-bar handle aid low torque operation.

LOCK PIN Safety bonnet lock pin prevents accidental disassembly.

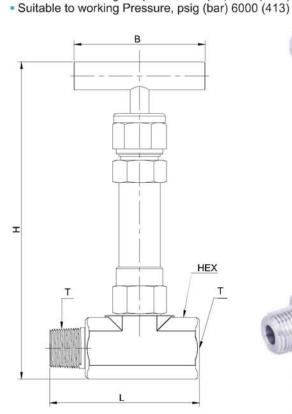

DUST CAP Prevents contamination and lubricant washout of bonnet assembly.

SOFT SEAT PTFE & Delrin Seat to ensure a tight-shut off even in abrasive process conditions.

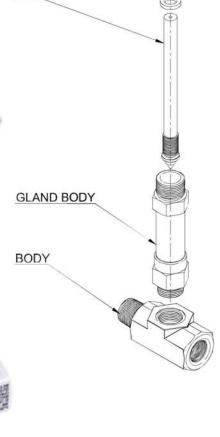

GRUB SCREW For locking the handle.

Features

- Upper packing provides secondary containment system above the bellows
- Hydraulic-formed multilayer bellows enhanced cycle life
- Non-rotating stem tip eliminates galling within the seat area
- Strictly controlled bellows stroke to improve safety and cycle life
- Suitable to working temperature °F (°C) -321 (-196) to 176 (80)
